

Latin name	Viburnum carlesii		Common name	Koreanspice Viburnum	
cultivar	'Aurora'		Family	Adoxaceae/Caprifoliaceae	
Year introduced	1958				
Developed by	Native range species: Korea				
Patent #/ information	Leslie Slinger, Slieve Donald Nursery, Newcastle, Northern Ireland				
parentage					
Location	Maxwell Arboretum Viburnum Collection, ID No. 14108				Quantity 2
Source/date			Planting size 1.5' bareroot	Planting date 6/3/1994	
Culture					
Sun/shade	Full Shade or Part Sun		Soil acid	Drainage well-drained	
Fertility			Moisture requirements moderate		
Plant characteristics	Like the species, but with redder buds; Dirr says that the flowers are larger as well				
Height x Spread	5-8' × 5-8'		Form rounded		
Flower	very fragrant				
Color	red in bud > open pink, then white			Size 5"	
Flower Form	rounded cymes		Bloom time mid-late April		
Leaf color	dark green above, paler beneath		fall color	wine red	
Leaf size	1-4" × .75–2.5"		Leaf texture dull to slight sheen, stellate pubescence above, densely so beneath		
Leaf form	simple, irregularly toothed		Leaf shape broad-ovate to elliptic, tip: acute, base rounded to subcordate		
Fruit color	red > black		Fruit type drupe		
Fruit time			Fruit size .3"		
Persistency	yes		Fruit wildlife use		
Bark/stem color	light brown to gray				
Bark/stem texture	stellate pubescence when young; older stems fissured				
Twig					
Bud	vegetative: foliose, naked, hairy				
Maintenance					

Pruning	
Wildlife Use	
Native use	
Historical/cultural info	N/A
Folklore/Culture	N/A
Insect Problems	none serious
Disease Problems	none serious
Landscape Uses
