

Latin name	Viburnum lantana		Common name	Wayfaringtree Viburnum	
cultivar	'Mohican'		Family	Adoxaceae/Caprifoliaceae	
Year introduced	1966		Native range	species: central, southern, western Europe (to Yorkshire in England), NW Africa, SW Asia	
Developed by	Donald Egolf, U.S. National Arboretum				
Patent #/ information					
parentage					
Location	Maxwell Arboretum Viburnum Collection, ID No. 1438			Quantity	1
Source/date	bare root from cooler	Planting size	18"-24"	Planting date	spring 1991
Culture	adaptable				
Sun/shade	full sun (best) to part shade	Soil	pH of 6.0–7.0	Drainage	well-drained
Fertility	Moisture requirements				
Plant characteristics					
Height x Spread	6.5' × 8'	Form	upright > spreading		
Flower	usually 250–350 per inflorescence				
Color	creamy white			Size	
Flower Form	cyme		Bloom time	May	
Leaf color	dark green		fall color		
Leaf size	3.5-4" × 1.75 × 2.25"		Leaf texture	pubescent	
Leaf form			Leaf shape		
Fruit color	orange-red > black		Fruit type	drupe	
Fruit time	July		Fruit size		
Persistency	4+ weeks before black		Fruit wildlife use		
Bark/stem color					
Bark/stem texture					
Twig					
Bud					
Maintenance					

Pruning	
Wildlife Use	
Native use	
Historical/cultural info	
Folklore/Culture	
Insect Problems	<p>resistance to bacterial leaf spot.</p> <p>Specimen, hedge, screen, massing, shrub border, foundation planting for large buildings</p> <p>http://www.usna.usda.gov/Newintro/mohican.pdf</p> <p>"'Mohican' is a superior seedling selection made by Donald R. Egolf from a population of 87 plants grown from seed obtained from Poland. The plant first flowered in 1952, was selected as superior in 1956, and was named and released October 25, 1966."--U.S. National Arboretum</p> <p>"Very ornamental in that all fruit colors can be seen in the same fruit cluster at one time. Fruit remains in the orange-red stage for 3 weeks or longer. "---Classic Viburnums</p> <p>Images: 4 © Susan Ladman 7 Wilson Nurseries all others © Emily Levine</p>
